ABOUT ME

A Full-Stack Developer from Zagreb, Croatia with a degree in marketing and a broad set of various skills. I would like to think of myself as a well-organized person, independent in my work with high attention to the detail.

I'm a father to a 2-year-old and a husband to a wonder-woman. Currently I work at an international publishing company, handling wide variety of tasks. My job is a weird mix of graphic editor meets developer meets research and development.

My experience is really wide, covering most of the things you would see in a marketing agency being done, but also in photography business, in education, in publishing business and in IT sector.

I'm interested in furthering this developer story of mine. There's a special satisfaction when things come together and work...

PORTFOLIO

Please visit https://rogulja.info/#projects for additional information about these projects. There are also links for github repos and demo sites where applicable.

PORTFOLIO DETAIL

01 **Marvin**

Web app that organizes information flow. It serves as unified place and removes the need to keep track of things across other tools

02 **Skillsplatform**

Web app that handles data input and, based on client specification, presents and visualizes that data in different ways

03 **Parserly**

Electron app that reads all of Elpical Claro logs and records atomic info in local sqlite db for BI/BA reports

04 **Compiley**

Electron based app that reads excel files, saves it in sqlite db and after normalization serves it via rest api

05 **FolderWatchNotify**

Electron app that crawls through all of defined resources looking for new, taken or done images

06 **IePanel**

Photoshop CS6 color profile / save location helper panel that automates mundane tasks
